

Environmental Policy

Gunma Plant

【Basic Philosophy】

Gunma Plant provides solutions to a wide range of industries through its advanced technologies in heat treatment, brazing, HIP, and machining. However, these manufacturing activities consume significant amounts of energy and raw materials and place a burden on the environment through the release of heat into the atmosphere and the generation of waste.

While carrying out these manufacturing activities, we recognize that our operations inevitably result in heat emissions and waste generation. Therefore, all employees shall remain aware of their environmental responsibilities, actively engage in environmental initiatives, and continuously promote the reduction of environmental impacts.

【Basic Policies】

1. We shall carry out energy conservation and efficiency improvements, prevention of environmental pollution, waste separation and reduction, and resource-saving and recycling activities.
2. In all production activities and related operations at our plant, we shall remain constantly aware of environmental impacts in consideration of climate change, promote pollution prevention and environmental conservation, and continuously improve our environmental management system.
3. We shall comply with all environmental laws, regulations, and other requirements to which our company is subject in all production activities.
4. To achieve this environmental policy, we shall set environmental objectives and targets, promote environmental management throughout the entire plant, and regularly review these objectives and targets.
5. This Environmental Policy shall be communicated to all employees and relevant parties involved in production activities to obtain their understanding and cooperation. As a responsible member of the local community, this policy shall also be made available to external parties upon request.

【Scope of Application】

Applicable Site: Gunma Plant

983 Shimoshinden, Tamamura-machi, Sawa-gun, Gunma 370-1132, Japan

Scope of Application: Manufacturing of aerospace and industrial components

(Heat treatment, brazing, welding, HIP [Hot Isostatic Pressing], diffusion bonding, and machining)

Personnel: All individuals working under the management of our plant within the applicable site

Gunma Plant

Plant Manager: Tomohiro Yonemoto
