

Environmental Policy

Ibaraki Plant

【Basic Philosophy】

Based on our management philosophy of “treasure the environment and value people”, Ibaraki Plant shall always keep in mind that our production activities be harmonized with the environment, and considerate to handling limited resources. At the same time, we shall again consider the importance of coexistence with the local community; strive to contribute to the community achieving the coexistence with global environmental protection, prevention of local environmental pollution, and our production activities.

【Basic Policies】

Ibaraki Plant is engaged in manufacturing superior energy-saving products such as high-efficiency gas turbines, liquid crystal and solar panels for aviation, space and industrial use through high technical expertise such as heat treatment, brazing, HIP and machining. We always keep in mind that it is indispensable for our production activities to run the business harmonized with the environment, protecting the global environment and contributing to the local community. We shall implement the following activities with all employees’ active involvement with the environment in order to continuously promote the reduction of the burden to the environment.

1. Based on our SDGs activities, we shall actively reduce power consumption, sort and reduce waste, prevent environmental pollution, and conserve and recycle resources.
2. We shall be aware of the environmental impact of all our production activities and promote pollution prevention and environmental conservation.
3. We ensure that we maintain an awareness of environmental impact of our production activities and all related activities to promote the prevention of pollution and protection of the environment.
4. We shall comply with environmental laws, regulations, ordinance, and other requirements, which our company agreed with, related to

environmental aspects.

5. In order to achieve the policies, we shall set up environmental objectives and targets, promote environmental management, and continuously improve its management system while conducting reviews of its objectives and targets regularly to improve our performance towards the environment.
6. We shall strive to prevent damage to health and reduce the environmental burden, constructing a management system of chemicals contained in products and used during the process.
7. We shall inform all employees and concerned parties about the environmental policies and ask them to understand and comply with them. Further, we shall disclose information to the public as a member of the local community whenever we have external requests.
